OFFERING THE FINEST IN PARTICLE RETENTION

System DR60F630

- 20 - 24" filter disc chamber
- Magnetic drive pump
- Optional 1528 carbon chamber
- 7200 GPH

System DR105HE575

- 35 - 24" filter disc chamber
- Mechanical seal pump
- Optional 3548 carbon chamber
- Optional SV3-60 slurry tank
- 9600 GPH

Carbon purification chamber for organic removal

These new style disc filtration systems include design features gained through more than 35 years of experience in developing our chemically resistant pumps and filter chambers. High flow rates to quickly remove particles, together with large surface area for solids loading are combined to provide extended operating life. Choice of disc media density to best serve the application. Optional carbon chamber and slurry tank to expand use of the system for years to come.

These disc filtration systems are engineered to provide efficient removal of particulate or organic impurities from a wide range of chemical and plating solutions to 160°F. Chambers and pumps feature non-metallic solution contact. All external steel surfaces are painted two-part epoxy gray enamel. Rugged support plates are polypropylene and will not warp. All other internals are CPVC.

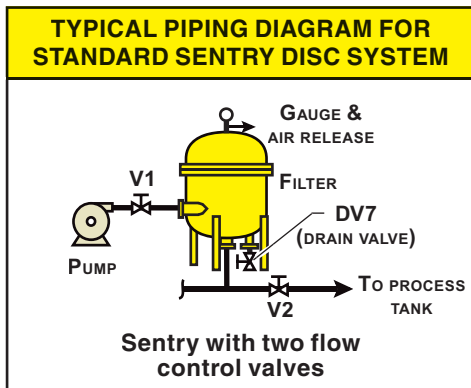

The following pages contain a representative sampling of available standard systems.

SENTRY DISC FILTRATION SYSTEMS with seal-less magnetic drive pumps

Standard SENTRY DISC systems include:

- Stationary steel mounting base coated with corrosion resistant 2-part epoxy paint.
- Motors are 230-460V/3/50-60, TEFC, 1725 or 3450 RPM. Systems wired for 230V/3/60 unless otherwise specified.
- Piping is solvent sealed CPVC, with EPDM "O"-rings

- at threaded connections.
- 0-60 PSI gauge with Hypalon® diaphragm guard.
- Two flow control valves — one between pump and filter, second at filter discharge.
- Ball valves are solvent sealed CPVC, with Viton® "O"-rings at filter inlet and outlet.
- Capped tee on filter inlet and outlet for drains or field installation of bulk carbon.

Available for all models, independent of pump style:

Granular carbon purification chamber installed on filter discharge with flow control valve is an available option. This allows filtered solution to pass through the activated carbon on a convenient "ON-OFF" basis before returning to the process tank. In addition to pump priming and chemical mixing, optional slurry tank with three additional valves allows pre-coating of disc media with filter aid and/or carbon.
