

## SYPHON PUMPS

MODELS	PRICE CODE NO.
PH10 4A	56-0000A 56-0011C

Refer to Bulletin P-404.

### VERIFY COMPATIBILITY OF PUMP MATERIAL WITH SOLUTION BEFORE USING.

Note: Acceptable chemical resistance is not an implied recommendation of use. Safe handling of chemicals to prevent spillage, damage to equipment, and explosion or personal injury must be avoided and is the responsibility of the user. Refer to page 2 for a chemical resistance table.

#### SAFETY PRECAUTIONS BEFORE STARTING PUMP

1. Read operating instructions and instructions supplied with chemicals to be used.
2. Refer to page 2, chemical resistance data chart for compatibility of materials in pump with solution to be used.
3. Note temperature limitations.
4. Personnel operating pump should always wear suitable protective clothing: face mask or goggles, apron and gloves.

#### BEFORE CHANGING APPLICATION OR PERFORMING MAINTENANCE

1. Wear protective clothing as described in Item 4 above.
2. Flush pump thoroughly with a neutralizing solution to prevent possible harm to personnel.
3. Verify compatibility of materials as stated in Item 2 of Safety Precautions above.

### HOW TO USE A SYPHON PUMP

#### MODEL PH10

Tighten the small top-cap by turning clockwise

and squeeze bellows several times. Continuous flow will start by syphon action. Syphon flow is instantly stopped by opening the small top-cap counterclockwise.

When not in use, the end of the discharge tube is placed in adaptor receptacle allowing drainage back into container.

#### MODEL 4A

Tighten the small top-cap by turning clockwise and actuate bellows in an up and down motion. Continuous flow will start by syphon action. Syphon flow is instantly stopped by opening the small top-cap counterclockwise.

When not in use, the end of the discharge tube is placed in adaptor receptacle allowing drainage back into container.

#### NOTE:

If pumping to a higher level is desired, continuous action of bellows if required.

**These pumps are not to be used with flammable or combustible liquids.**
